If such a small % of Latina/os identify as Latinx, is it appropriate for scholars, the media, and activist to label the community as Latinx? Why or why not?

mind, especially given the fact that the term is becoming more common in this generation and will most likely stay throughout. However, others (specifically the older generation) feel as though the term shouldn't be changed. I can see

and activist to label the community as Latinx because it removes gender biases. The terms Latina/o are feminine and masculine. Instead of referring to a group of people of who is more dominant. The Latinx

disagree that its appropriate for scholars to use. I agree because of it being a gender neutral and inclusive term. I disagree because some may not feel inclined to use the term such as those from caribbean

Given that Latinx is most commonly used by academics, do you think the term is elitist? Why or why not?

The idea of the term itself and how it came to be can be seen as elitist however the meaning behind the term is not. The term Latinx unites people regardless of how they identify outside of their ethnicity
